

Conduit Quality Control

RMC's Galvanized Rigid Conduit (GRC) and Electrical Metallic Tubing (EMT) has excellent protection, strength, and ductility for raceway systems. Manufactured with high strength steel, our conduit is free of flaking, chipping, or corrosion.

Tested & Evaluated

At RMC, we take our commitment to quality control seriously. From the moment the materials arrive at our facility to the final packaging of our conduit products, we have a thorough testing process in place. Our goal is to deliver top-quality products that meet the highest standards of excellence.

Quality Assured

Quality control procedures are in place from the time materials are received at the facility to when the finished conduit are packaged and readied for shipping.

A three step process to guarantee quality

Step 1: Rigorous Assessments

Procurement of raw materials, production, and final product delivery - every stage undergoes rigorous examination by our team of experts. We understand that all materials and processes play a crucial role in the overall performance of our conduit raceway system, that's why we meticulously scrutinize the quality of our materials and manufacturing processes.

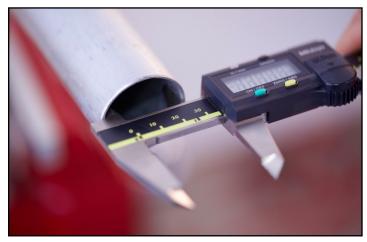

Step 2: Intensive Research and Development

Innovation is at the core of what we do. We strive to continuously improve the quality of our products and manufacturing efficiencies to provide the highest standards in the industry. We are dedicated to improving the ease of installation and corrosion resistance of our comprehensive conduit systems through rigorous research and development efforts.

Step 3: Internal Audits

To maintain the highest level of quality control, we conduct regular internal audits. These official inspections allow us to identify areas for improvement and refine our quality control systems and best practices.

Electrical Metallic Tubing - (EMT) Conduit

RMC's Electrical Metallic Conduit (EMT) (UL797) has excellent protection, strength, and ductility for raceway systems. Our EMT is manufactured with high strength steel, and produced by the electrical resitance welding process which ensures continuous weld seams that are free from interior defects. We rigorously test our EMT to provide field bending without flaking, kinking or cracking.

Features

- Galvanized coating provides enhanced corrosion proteciton
- Greater wire capacity and less friction between wall to wire to minimize wire chafing.
- Interior Zinc Coating provides a smooth surface for faster wire pulling.

Listings

- Underwriters Laboratories Standard for EMT-Steel (UL797) file # E531582
- American National Standards Institute (ANSI® C80.3)
- National Electric Code® Article 358

Galvanized Rigid Conduit - (GRC)

RMC's Galvanized Rigid Conduit (GRC) (UL6) has excellent protection, strength, and ductility for raceway systems. Our rigid conduit is manufactured from high strength hot-dipped galvanized steel and produced by the electrical resistance welding process which ensures continuous weld seams that that will not split or crack at the weld and are free from interior defects. Our precision threaded ends ensure fast assembly in the field.

Features

- Rigid conduit provides exceptional physical protection, reduces exposure to EMF and shields against electromagnetic interference.
- Hot dipped galvanized coating provides enhanced corrosion protection.
- Impact-resistant and non-combustible.
